Application ser. no. 09/531,743

REMARKS

1. Applicant thanks the Examiner for his remarks and observations, which have greatly assisted Applicant in responding. Applicant respectfully requests reconsideration of the application.

2: 35 U.S.C § 103

Claims 28-30 stand rejected under 35 U.S.C § 103(a) as being unpatentable over Krane in view of Uppaluru. In order to describe the invention more clearly, Applicant amends claim 30 to describe:

"operating an interactive user operated Internet voice portal having established multiple predetermined vertical domains of interest and a hierarchy of attributes within each vertical domain of interest from top to bottom, the method comprising operations of:

responsive to a user placing a telephone call to the voice portal, identifying the user and obtaining user selection of a vertical domain of interest;
performing funneling operations comprising:

(a) building a vocabulary set containing top-level attribute values appropriate to the selected vertical domain of interest;

(b) querying the user to choose a top-level attribute value, applying speech recognition to user responses where recognized answers are limited to contents of the vocabulary set;

(c) until a bottom level attribute value is chosen, repeatedly performing operations comprising: (1) building an updated vocabulary set containing attribute values appropriate to the latest chosen attribute value, and (2) querying the user to choose a next-lower-level attribute value and applying speech recognition to user responses where recognized answers are limited to contents of the updated vocabulary set;

responsive to a bottom level attribute being chosen, conducting an Internet search of non-voice sources for prescribed types of information

Application ser. no. 09/531,743

pertaining to the chosen bottom-level attribute value and audibly providing resultant information to the user via the telephone call."

Applicant notes that the systems of Krane and Uppaluru attempt to solve the same problem, providing Internet access to data that is published in audio or spoken format. Krane describes a system for accessing pre-recorded audio messages over the Internet. Uppaluru provides a system and method for accessing voice and speech data files. Similar to Krane, the voice and speech data files, as shown and described in Figure 9 and at cols. 20-21 are pre-recorded audio information published specifically for access by users using a voice web browser. Thus, both Krane and Uppaluru both seek to provide access to an extremely limited sub-set of the data available over the Internet.

In sharp contrast, the invention is concerned with extending access to the Internet to anyone using convenient and readily available means. Thus, as shown in Figures 28 and 29 and described at page 35, line 20 to page 38, line 1, the invention retrieves non-spoken or non-audio information, such as text, from the Internet and transforms it into spoken output. Claim 28 is amended to describe this feature of the invention more clearly. No new matter is added by way of the amendment.

There is no teaching or suggestion in the combination of the subject matter of amended claim 28. Accordingly, claim 28 is deemed allowable over the combination of Krane and Uppaluru. In view of their dependence from an allowable parent, the dependent claims are deemed allowable without any separate consideration of their merits.

The above amendment is made to solely for the purpose of describing the invention more clearly, in the interest of advancing prosecution of the application. Such amendment is not an indication of Applicant's agreement with the Examiner's position, nor does it signify Applicant's intention to sacrifice claim scope. Application expressly reserves the right to pursue patent protection of a scope it reasonably believes it is entitled to in one or more continuing applications.

Application ser. no. 09/531,743

For the record, Applicant respectfully traverses any and all factual assertions in the file that are not supported by documentary evidence. Such include assertions based on findings of inherency, assertions based on official notice, and any other assertions of what is well known or commonly known in the prior art.

CONCLUSION

In view of the foregoing, the Application is deemed to be in allowable condition. Applicant therefore respectfully requests reconsideration and prompt allowance of the claims. Should the Examiner have any questions regarding the Application, he is invited to contact Applicant's attorney at 650-474-8400.

Respectfully submitted,

Michael A. Glenn
